CAREER IN FOOD TECHNOLOGY

Half Day Training Program

Job Prospects

Despite the fact that food processing industry in India is at developing stage, it offers exponential career opportunities to trained professionals in food processing as there are nearly 500 million middle and upper class consumers and food processing companies do not want to miss the opportunity. Moreover, the Ministry of Food Processing Industries has ambitious plan to set up more than 500 food parks across India in every parliamentary constituency so that a real food revolution can be brought about and employment can be generated.

With aptitude to work and requisite skills one can find employment in companies, food research laboratories, catering companies, food wholesalers, hospitals, restaurants etc. Higher education and special qualification helps in getting attractive position within the food processing sector. Qualification in home science and specialisations in food technology, nutrition or food services management can help you climb up the ladder in the industry. Similarly, certification in dietetics, applied nutrition, food science and preservation helps candidates advance in career

Different Roles, Different Names

Like any industry, food industry too offers varied range of roles and positions to professionals.

Research Scientists: Research scientists work towards enhancing yield, flavour, nutritive value, etc. of packaged food so that they have greater acceptance among consumers.

Food technologists: The fundamental work of food technologist is to offer techniques for preservation, conservation and processing of food items to be packaged.

Additionally, they check the compliance of procedure during the food processing and ensure that there is no contamination and adulteration. Ensuring top quality nutritional value in the food products by putting quality raw materials is an additional job for a food technologist.

Engineers: The food processing industry is so broad that it employs the services of

various engineers for planning, designing, improving and maintaining the entire processing system of a unit.

Organic Chemists: Qualified professionals in organic chemistry working in food processing industry ensure that there is proper method to convert raw materials to processed food.

Biochemists: Looking after the flavour, texture, storage, quality of packaged food products, biochemists ensure that there is nothing the consumers have to complain about.

Analytical Chemists: Working as quality analyst and checker, analytical chemists ensure prime quality packaging of foods and beverages.

Home Economists: Ensuring congruency of the instructions on the containers and the food products contained in it is the job of home economists.

Managers and accountants: Besides technical professionals, non-technical jobs such as managers and accountants work towards the management of the processing unit and in the supervision of the production process.

Tips for Getting Hired

The expanding food processing sector offers extremely attractive employment opportunities to those who possess technical qualification in food processing. However, there are specific requirements which are needed to get hired from top notch food processing firms. Some tips can be:

- o Early start to study food processing can be beneficial in getting a job at early age and for that one should start preparing for various entrance exams conducted soon after 10+2.
- o Possessing some soft skills such as being conscientious, meticulous, organizational, cleanliness and hygiene focused, prudent and hard working can give edge over rest of candidates.
- o There is no match for technical acumen in food processing; therefore, candidates possessing excellent domain knowledge always have higher employability.
